

## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

### **Listing of Claims:**

1. (Currently amended) A foam-generating kit comprising:
  - A. a non-aerosol container comprising a foam-generating dispenser for generating a foam, wherein the foam-generating dispenser includes a gas imparting mechanism to form the foam from air via an air injection piston, foam-generating aperture, an impinging surface, a mesh or net, a pump, and an additional mesh and/or sponge located slightly within, and/or at the tip of the nozzle of said container, and a sprayer; and
  - B. a high surfactant dishwashing composition comprising, by weight of the high surfactant dishwashing composition, at least about 20% of a surfactant system, said dishwashing composition comprising at least one of a microemulsion and a protomicroemulsion,wherein when employed with the high surfactant dishwashing composition, the foam-generating dispenser generates a foam having a foam to weight ratio of greater than about 2 mL/g.
2. (Previously presented) The foam-generating kit according to Claim 1, wherein said surfactant system comprises from about 30% to about 99% of the high surfactant dishwashing composition, by weight.
3. (Previously presented) The foam-generating kit according to Claim 1, wherein the foam-generating dispenser comprises at least three meshes, wherein the high surfactant dishwashing composition flows through the three meshes in series so as to generate the foam.
4. (Previously presented) The foam-generating kit according to Claim 1, wherein the high surfactant dishwashing composition is a Newtonian Fluid.

5. (Previously presented) The foam-generating kit according to Claim 1, wherein the high surfactant dishwashing composition further comprises an enzyme.
6. (Original) The foam-generating kit according to Claim 1, further comprising a shaped applicator.
7. (Previously presented) The foam-generating kit according to Claim 1 wherein the high surfactant composition comprises non-visible droplets of oil.
8. (Previously presented) The foam-generating kit of Claim 1, wherein the non-aerosol container is a single compartment container.

Claims 9-10 (Canceled)

11. (Previously presented) A foam-generating kit according to Claim 1 wherein said high surfactant dishwashing composition is in the form of a microemulsion.
12. (Previously presented) A foam-generating kit according to Claim 1 wherein said high surfactant dishwashing composition is in the form of a protomicroemulsion.
13. (Previously presented) A foam-generating kit according to Claim 7 wherein said non-visible droplets of oil have a maximum diameter of less than about 100 angstroms as measured by ISO method 7027.
14. (Previously presented) The foam-generating kit according to Claim 1 wherein the microemulsion or protomicroemulsion comprises a low water-soluble oil having a solubility in water of less than about 5,000 ppm.
15. (Previously presented) The foam-generating kit according to Claim 14 wherein the low water-soluble oil is selected from the group consisting of: terpenes, isoparaffins, and mixtures thereof.
